Dear **Mr. Morrison,**

Update and Timeline: Work is complete. Drums, IBC tote removal, and impacted debris have been documented, manifested transported, and disposed. Manifests are on hand and will be electronically scanned and emailed. A photo log .pdf will follow for "Before, During, and After" work completion.

North side berm of property (facing north, right hand side) berm Logs and debris were removed and a smooth backfill was graded to match the northwest section, black dirt topsoil minimum of 4" base has added as capping, IOWA DOT "Urban Blend" seed mix has been placed and erosion control complete. Capping was completed to North Fence Line bordering Canadian Pacific Railroad. Fence is still in place as the condition did not constitute removal.

On the east boundary line, work was completed on the east boundary line consistent with efforts on North Berm. Gradual down gradient sloping has been completed which was previously the same prior to shrubbery overgrowth matching the common property easement for shared water runoff. The East property has construction and grading activity at the same timeframe so both adjoining properties meet similar grade. This grade and shared draining ditch line border the North and South property line.

The south section has been completed. Grade, fill as needed, and smooth backfill was graded to request.

*Enviromark did utilize laser transom and document readings to prove grade to south east.

The entire property has been completed. Photo documentation has been completed showing clearing, backfill, rough grade, finish grade. Seeding and straw matting placed. We are working on assembly of the invoice now.

Sincerely,

Dan Carstens
